Premier Ponds

# Aeration Systems

Great for adding dissolved oxygen into a pond. Especially in the hot summer months.

# Automatic Filling System

Automatically fill your pond, waterfall, or fountain. Never drag your hose out to fill again.

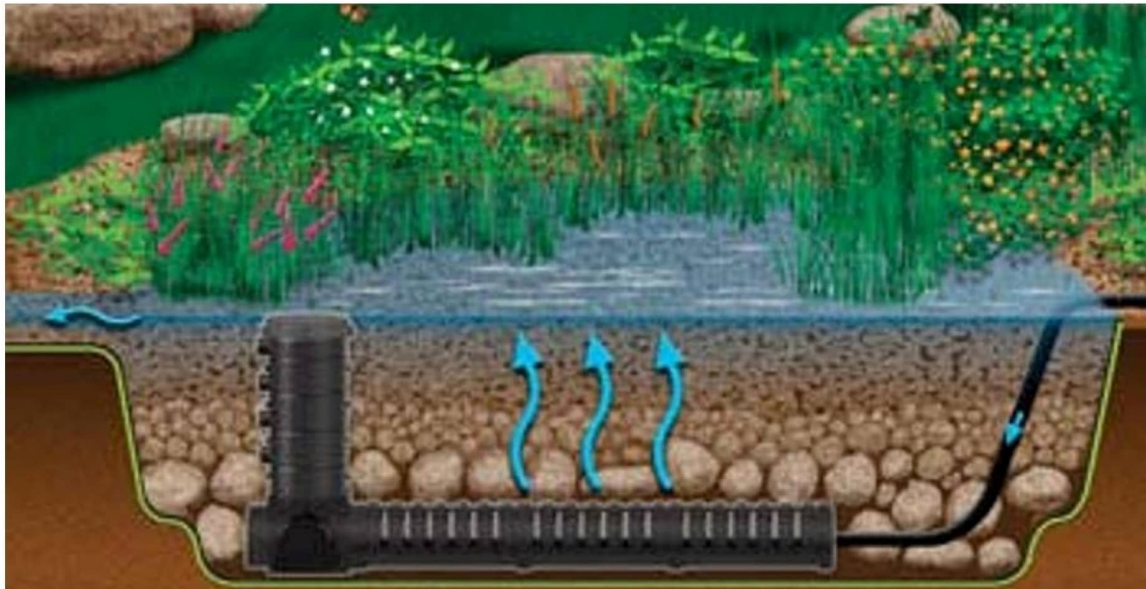

# Beach Front Edge

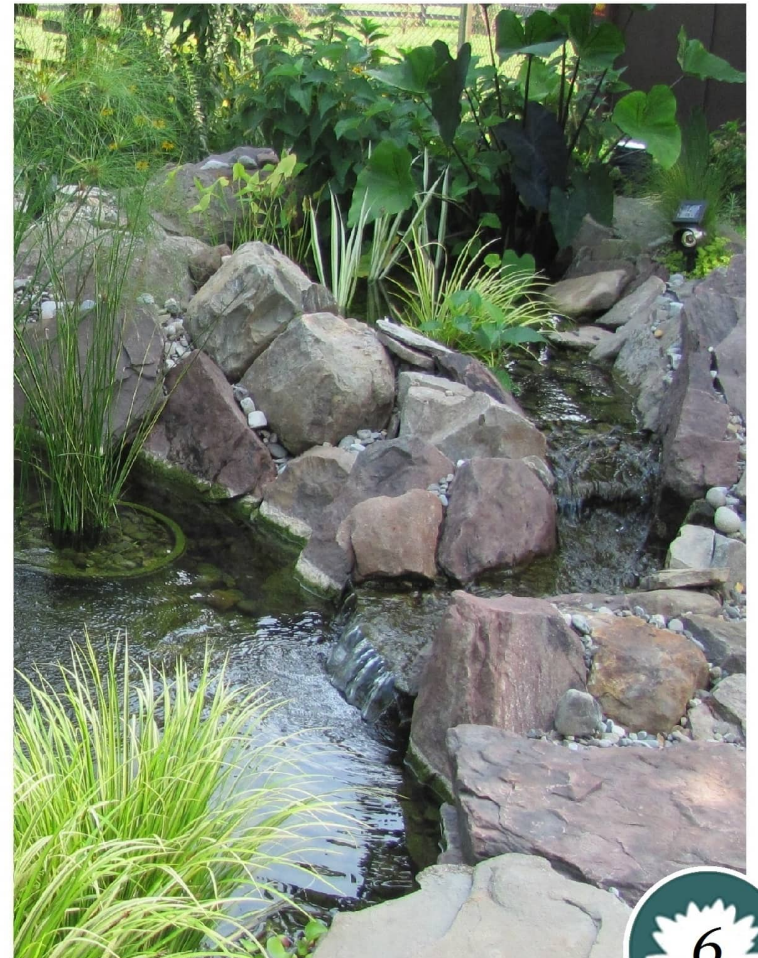

# Bog Filters (Aquatic Plant Filters)

Pond water is pumped through the roots of aquatic plants. After the water fills up the plant area it flows back into the pond through a stream or waterfall. The Aquatic plants filter the water as it passes through them.

*If you have the space these make incredible filters!*
